PROCEDURE : INCENTIVE SPIROMETRY (PROCEDURE A)
EXPECTED OUTCOME : The student should be able to perform incentive spirometry correctly.
ASSESSMENT TASK : Return Demonstration

| Assessment Dimension | Exceptional (4) | Good (3) | Average (2) | Poor (1) | SCORE |
|---|---|--|---|---|-------|
| 1. Verify the doctor's order | Verified the doctor's order properly and accurately. | Verified the doctor's order with minimal error. | Verified the doctor's order improperly and inaccurately. | Failed to verify the doctor's order. | |
| 2. Wash hands | Observed principles of medical hand washing. | Hand washing was done with minimal errors. | Hand washing was done with maximal errors. | Hand washing was not done. | |
| 3. Gather the materials. Identify the patient. | Gathered materials and identified patient by asking his/her name and checking his/her ID band politely. | Gathered materials and performed the two (2) ways of identifying patient. | Gathered and performed one (1) way of identifying patient. | Failed to gather and identify patient. | |
| 4. Greet and explain the procedure. | Greeted and explained procedure to the client clearly and completely with client's approval. | Greeted and explained procedure but lacks details. | Greeted and explained procedure but in an unclear manner. | Failed to greet and explain the procedure. | |
| 5. Position the patient comfortably and provide privacy. | Positioned the patient comfortably and provided privacy during the entire procedure. | Positioned the patient comfortably and provided privacy but not in the entire procedure. | Positioned the patient comfortably and provided privacy but was observed only at times. | Failed to provide privacy and position the patient comfortably. | |
| Instruct client to: 6. Hold the incentive spirometer upright, with both hands | Held the incentive spirometer correctly with both hands. | Held the incentive spirometer incorrectly with one hand. | Held the incentive spirometer incorrectly with further instructions. | Failed to hold the incentive spirometer. | |
| 7. Slide the indicator (located in the left-hand column when you are facing the spirometer) to the desired level. For example, start at 1250 milliliters and slowly increase as your treatment progresses | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 8. Place the mouthpiece into your client's mouth and instruct the patient to tightly seal his/her lips around it | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 9. With lips tightly sealed around the mouthpiece, breathe in slowly and as deeply as possible. The piston that is resting below the indicator should now rise toward the top of the column | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 10. Hold breath for at least 3 seconds and allow the piston to fall back to the bottom of the column | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 11. After each set of deep breathing, cough to help clear the airways of mucus. Ask client to rest for a few seconds and repeat steps 2-8, 10 times each hour while your patient is awake | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 12. Provide comfort. Document the procedure. | Provided comfort and documented the information about the procedure properly and completely. | Provided comfort and some of the details of procedure were not documented. | Provided comfort but most of the details of procedure were not documented. | Documentation was not done. | |

PROCEDURE : MANAGING CHEST DRAINAGE SYSTEM (PROCEDURE A)
EXPECTED OUTCOME : The student should be able to perform management of chest drainage system correctly.
ASSESSMENT TASK : Return Demonstration

| Assessment Dimension | Exceptional (4) | Good (3) | Average (2) | Poor (1) | SCORE |
|--|---|--|---|---|-------|
| 1.Verify the doctor's order | Verified the doctor's order properly and accurately. | Verified the doctor's order with minimal error. | Verified the doctor's order improperly and inaccurately. | Failed to verify the doctor's order. | |
| 2.Wash hands | Observed principles of medical hand washing. | Hand washing was done with minimal errors. | Hand washing was done with maximal errors. | Hand washing was not done. | |
| 3.Gather the materials. Identify the patient. | Gathered materials and identified patient by asking his/her name and checking his/her ID band politely. | Gathered materials and performed the two (2) ways of identifying patient. | Gathered and performed one (1) way of identifying patient. | Failed to gather and identify patient. | |
| 4.Greet and explain the procedure. | Greeted and explained procedure to the client clearly and completely with client's approval. | Greeted and explained procedure but lacks details. | Greeted and explained procedure but in an unclear manner. | Failed to greet and explain the procedure. | |
| 5.Position the patient comfortably and provide privacy. | Positioned the patient comfortably and provided privacy during the entire procedure. | Positioned the patient comfortably and provided privacy but not in the entire procedure. | Positioned the patient comfortably and provided privacy but was observed only at times. | Failed to provide privacy and position the patient comfortably. | |
| 6.If using a chest drainage system with water-seal, fill the water- seal chamber with sterile water to the level specified by the manufacturer. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 7. Ensure that the drainage tubing does not kink, loop or interfere with the patient's movements. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 8. Monitor characteristics of drainage including color, amount and consistency. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 9. Mark the drainage from the collection chamber with tape on the outside of the drainage unit. Mark hourly daily increments(date and time) at the drainage level. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 10. Encourage the patient to assume a comfortable position with good body alignment. The patient should be turned and reposition every 1.5 to 2 hours. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 11. Make sure there is fluctuation (tidaling) of the fluid level in the water-seal chamber. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 12. Observe for air leaks in the drainage system, they are indicated by constant bubbling in the water-seal and assess the chest tube for correctable external leaks. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 13. Encourage deep breathing and coughing at frequent intervals. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 14. Gently "milk" the tubing in the direction of the drainage chamber as needed. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 15. Assist the patient with range-of-motion exercises for the affected arm and shoulder. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 16. If the patient is lying on the stretcher and must be transported to another area, place the drainage system below the chest level. Do not clamp the chest tube during transport. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |

PROCEDURE : TRACHEOSTOMY CARE WITH SUCTIONING (PROCEDURE B)
EXPECTED OUTCOME : The student should be able to perform tracheostomy care with suctioning correctly.
ASSESSMENT TASK : Return Demonstration

| Assessment Dimension | Exceptional (4) | Good (3) | Average (2) | Poor (1) | SCORE |
|--|---|--|---|---|-------|
| 1. Verify the doctor's order | Verified the doctor's order properly and accurately. | Verified the doctor's order with minimal error. | Verified the doctor's order improperly and inaccurately. | Failed to verify the doctor's order. | |
| 2. Wash hands | Observed principles of medical hand washing. | Hand washing was done with minimal errors. | Hand washing was done with maximal errors. | Hand washing was not done. | |
| 3. Gather the materials. Identify the patient. | Gathered materials and identified patient by asking his/her name and checking his/her ID band politely. | Gathered materials and performed the two (2) ways of identifying patient. | Gathered and performed one (1) way of identifying patient. | Failed to gather and identify patient. | |
| 4. Greet and explain the procedure. | Greeted and explained procedure to the client clearly and completely with client's approval. | Greeted and explained procedure but lacks details. | Greeted and explained procedure but in an unclear manner. | Failed to greet and explain the procedure. | |
| 5. Assist the client in a semi – fowler's position, Place clean towel or drape across the clients chest and provide privacy. | Positioned the patient comfortably and provided privacy during the entire procedure. | Positioned the patient comfortably and provided privacy but not in the entire procedure. | Positioned the patient comfortably and provided privacy but was observed only at times. | Failed to provide privacy and position the patient comfortably. | |
| 6. Open tracheostomy care kit and other sterile supplies. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 7. Wear clean gloves and unlock the inner cannula and remove it by gently pulling out toward you and place the inner cannula in the soaking solution. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 8. Remove the soiled tracheostomy dressing and place it in your gloved hand and discard. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 9. Wash hands and put on the sterile gloves and keep it sterile during the procedure. <ul style="list-style-type: none">● Clean the lumen and entire inner cannula thoroughly using the brush moistened with soaking cleaning solution.● Rinse the inner cannula thoroughly in the normal saline.● After rinsing, gently tap the cannula against the inside edge of the saline container. Use a pipe cleaner to dry only the inside of the cannula, do not dry the outside | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 10. Insert the inner cannula by grasping the outer flange and inserting the cannula in the direction of its curvature. Lock the cannula in place by turning the lock. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 9. Clean the incision site and tube flange. <ul style="list-style-type: none">● Using sterile cotton applicators moistened with normal saline, clean the incision site, use each applicator only once and then discard.● Clean the | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |

| | | | | | |
|---|--|--|--|-----------------------------|--|
| flange of the tube in the same manner. Thoroughly dry the client's skin and tube flange with dry gauze. | | | | | |
| 10. Apply sterile dressing and Change the tracheostomy ties as needed. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 11. Document all relevant information. | Provided comfort and documented the information about the procedure properly and completely. | Provided comfort and some of the details of procedure were not documented. | Provided comfort but most of the details of procedure were not documented. | Documentation was not done. | |

PROCEDURE : SURGICAL SCRUBBING AND DRYING (PROCEDURE C)
EXPECTED OUTCOME : The student should be able to perform surgical scrubbing and drying correctly.
ASSESSMENT TASK : Return Demonstration

| Assessment Dimension | Exceptional (4) | Good (3) | Average (2) | Poor (1) | SCORE |
|---|-------------------------------|--|--|------------------------|-------|
| 1. Gather materials to be used. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 2. At the surgical sink, wet arms, hands and elbows. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 3. Maintain hands in upright position. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 4. Apply soap and rub hands and arms up to 3 inches above elbows. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 5. Rinse both hands and arms. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 6. Get a brush. Rinse brush and apply soap. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 7. Brush your non-dominant hand by your dominant hand, starting from the fingertips and nails in circular motion. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 8. Fingertips and nails, 30 strokes. All sides of each fingers, 20 strokes, palm 20 strokes, side of the hand 20 strokes, back of the hand 20 strokes Arms: for each third of the arm 20 strokes, 3 inches above the elbow 20 strokes, elbow 20 strokes. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 9. Rinse brush thoroughly and reapply soap. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 10. Brush your dominant hand by your non-dominant hand. Follow step no. 8. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 11. Rinse brush, hands and arms. Be careful not to touch any part of the sink and faucet. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 12. Drop the brush into the sink. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 13.Keep arms flexed and proceed to the area with sterile field. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 14. When picking up the towel, do it with a swift, efficient motion. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 15. Take the towel in the middle, being careful not to contaminate the sterile gown under it. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 16. Bend at the waist to help prevent the sterile towel from touching the unsterile gown while drying your hands and arms. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 17. Dry hand to mid-lower arm, then transfer dry end of towel to other hand. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 18. Do not dry hand then arm and return to same hand. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 19. After the second hand and mid-lower have been dried, fold towel in thirds and dry elbows. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 20. Be sure hand is well covered. When transfer of towel is made from hand to hand, do not allow hand to touch where elbow has touched. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 21. Discard towel in linen hamper. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |

PROCEDURE : CLOSED GLOVING/ GOWNING/ OFFERING GOWN TO ANOTHER PERSON (PROCEDURE C)
EXPECTED OUTCOME : The student should be able to perform closed gloving, gowning, offering gown to another person correctly.
ASSESSMENT TASK : Return Demonstration

| Assessment Dimension | Exceptional (4) | Good (3) | Average (2) | Poor (1) | SCORE |
|---|-------------------------------|--|--|------------------------|-------|
| 1. Maintain sterility of gown and gloves during the entire procedure. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 2. Grasp the gown and step backward. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 3. Allow the bottom part of the gown to fall. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 4. Dry handle and arm using the bottom part of the gown. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 5. Open the gown and slip both arms in the gown simultaneously. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 6. Keep your hands inside the sleeves of the gown. The circulating nurse will secure the ties of the gown. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 7. With hands still inside the sleeves, open the wrapper of the sterile gloves already placed in the sterile field. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 8. With your dominant sleeved hand, place the palm of the non- dominant hand glove against the sleeved palm of the non- dominant hand. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 9. Grasp the cuff of the glove with your non-dominant hand. With your dominant hand, turn the cuff over the end of the non- dominant hand and gown's cuff. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 10. Slowly extend the fingers into the glove while holding the glove and the gown cuffs. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 11. With the gloved non-dominant hand, repeat steps 8 – 10. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 12. Interlock your gloved fingers to fit the gloves. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 13. Unfold the gown, holding it at the neckband. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 14.Keep the hands on the outside part of the gown under the protective cuff and shoulder area. Offer the inside of the gown to the surgeon. The surgeon slips into the sleeves. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 15. Release the gown. The surgeon holds arms outstretched while the circulating nurse pulls the gown into the shoulders and adjust the sleeves and cuffs. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 16. Get the right glove, grasp it firmly with the fingers under the everted cuff. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 17. Hold the palm of glove toward the surgeon. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 18. Stretch the cuff sufficiently for the surgeon to insert the hand. Avoid touching the hand by holding your thumbs out. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
| 19.Exert upward pressure as the surgeon plunges the hand into the gloves. Unfold the everted glove cuff over the cuff of the sleeve. | Performed the step correctly. | Performed the step with little instructions. | Performed the step with some instructions. | Failed to do the step. | |
